

OneXafe Solo

Plug-and-Protect Anywhere, Anytime Management.

For small businesses with simpler environments, Arcserve OneXafe Solo features a plug-and-play, compact appliance that's extremely easy to deploy and manage all within a few simple steps: plug it in, connect to internet, and start protecting in minutes. By streaming data directly to the cloud, OneXafe Solo significantly reduces infrastructure requirements onsite while disaster-proofing the data at the same time. OneXafe Solo leverages the same powerful, enterprise-class data protection technology that drives Arcserve ShadowXafe. OneXafe Solo delivers powerful recovery, simple management, and total business continuity.

Ultimate Flexibility for Any Environment

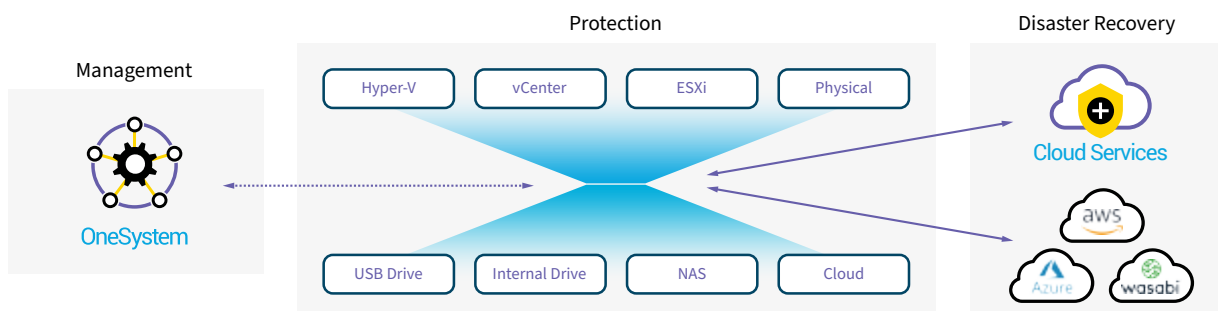

OneXafe Solo provides ultimate flexibility with a range of deployment options independent of the IT environment. It can be deployed in environments with limited infrastructure, whether the limitations stem from lack of local storage or virtual environments, ensuring secure data protection for any environment. With its set-and-forget capability, OneXafe Solo enables efficient management of data protection without requiring dedicated resources, whether staffing or capital.

Innovative Cloud-based, SLA-based Policy Management

OneXafe Solo SLA-based policy administration makes it easy to manage data protection, reducing the overhead costs and complexity. OneXafe Solo uses Arcserve OneSystem for cloud-based management from anywhere, anytime through any web browser. This eliminates the need for onsite dedicated servers and time-consuming software upgrades to manage data protection. Policy creation is intuitive with all the ingredients that make up the SLA— backup frequency, retention policy, target location, replication for cloud disaster recovery.

Scales as You Grow

OneXafe Solo allows you to accommodate additional data protection policies and manage at scale with just a few clicks. With the same set of tools, you can address multiple use cases, physical or virtual server protection, on-premise or direct to cloud backup, from one machine to 20 machines, all with always-on offsite disaster recovery (DR). In addition to cloud backup, OneXafe Solo provides the ability to back up to external storage, such as to another NAS device, making it easy to scale. It also supports replication to public storage (AWS, Azure, Wasabi) for off-site copies.

Cost-effective Enterprise-class Features

OneXafe Solo provides powerful, enterprise-class data protection at SMB pricing in a compact device form. Its data protection is both hostbased and agent-based, complete with physical and virtual system recovery. OneXafe Solo provides instant boot recovery, with patented VirtualBoot technology, for virtual machines within milliseconds, recreates entire sites in the cloud, and backs up systems efficiently. It delivers SLA-based protection, embedded analytics, best in industry RTO, and innovative recoverability tract technology.

Cloud-based DRaaS for Total Business Continuity

OneXafe Solo is fully integrated with Arcserve Cloud Services (DRaaS) built on top of Google Cloud Platform (GCP) to provide total business continuity with an orchestrated one-click failover in the cloud, easily recovering the entire infrastructure. This results in reduced downtime costs and improved productivity, while offering the highest service level agreements (SLAs).

Features and Benefits		
Features	Benefits	
Management Simplicity	<ul style="list-style-type: none"> Single pane of glass for ease of management Intuitive SLA-based data protection workflow Optimized for ease of use Status notification emails 	<ul style="list-style-type: none"> Plug-and-Play deployment & activation One-click activation of device Auto-provisioning of any non-network attached device, automatically added whether external or internal
Flexible Recovery	<ul style="list-style-type: none"> Recover to dissimilar HW or virtual environments Ensures that recovery is fast and quick (v2v, p2p, v2p & p2v) Utilize resources on hand. No waiting for any specific resources 	
Instant Recovery	<ul style="list-style-type: none"> Quickly recover files/folders and entire system in seconds Recovery using VirtualBoot IO read-ahead technology, irrespective of the VM size Direct recovery to primary store means no Virtual Storage Motion and no performance impact during recovery 	
Reliable Recovery & Data Integrity	<ul style="list-style-type: none"> Dependable recovery Supports Hyper-V, vSphere, and ESXi No need for migration to primary storage after recovery as it's automatic Automated, advanced reverification of backup images along with inflight verification ensures dependable backup images Integration with 3rd party clouds (AWS, Azure, Wasabi) for off-site copies and cloud object lock for data immutability Retained metadata for improved recovery experience Cold file access technology for file folder recovery AES 256-bit encryption for data security (in-flight and at rest) Simple, consistent recovery process, regardless of source of recovery point, local or cloud Two-factor authentication 	
Integrated DRaaS Built on GCP	<ul style="list-style-type: none"> Total business continuity Orchestrated, one-click virtual failover Self-service portal with no 3rd party intervention during recovery Efficient WAN optimized replication directly to Arcserve Cloud services Seed/BMR drives and web download Auto-discovery of C drive 	
Hardware Spec

About Arcserve

Arcserve, a global top 5 data protection vendor, provides the broadest set of best-in-class solutions to manage, protect and recover all data workloads, from SMB to enterprise and regardless of location or complexity. Arcserve solutions eliminate complexity while bringing best-in-class, cost-effective, agile, and massively scalable data protection and certainty across all data environments. This includes on-premises, cloud (including DRaaS, BaaS, and Cloud-to-Cloud), hyperconverged, and edge infrastructures. The company's nearly three decades of award-winning IP, plus a continuous focus on innovation, means that partners and customers, including MSPs, VARs, LARs, and end-users are assured of the fastest route to next-generation data workloads and infrastructures. A 100% channel-centric organization, Arcserve has a presence in over 150 countries, with 19,000 channel partners helping to protect 235,000 customers' critical data assets.
